NEW LIFE SCANDINAVIAN INSULATION

All our spas have received a new type of Life Scandinavian insulation. These insulation boards have been inserted into the spa's support frame, rather than being attached to the exterior cladding. The insulation is dimensionally accurate for the frame's inner measurements and can be easily installed or uninstalled.

The foam insulation under the rim has also been exchanged for an aesthetically more pleasing Life insulation.

In some of our premium Life pools, we have used the best possible insulation material in the tray instead of the previous polyfoam insulation: air. We achieved this by installing an ABS sheet near the bottom plate, creating insulating air pockets.

Insulating air pockets

SMART-IN STEP SYSTEM

The heat pump can be stowed under the larger step. The heating of the water can be maintained more cost efficiently, without affecting the product's aesthetics.

The Smart-In Step system, equipped with a built-in heat pump, is a reversible heat pump that warms the spa in winter and cools it in summer — testing showed it can bring water down to about 68°F. Inside the stairs, we have designed storage compartments where bathers can store towels or water treatment products. Additionally, our Peaklife models are equipped with a USB socket for mobile phone charging.
