

WATER CLARITY

Every Wellis hot tub is equipped with a multi-stage filtration and hygiene system that ensures crystal clear water with minimal effort. The process begins with our special antimicrobial filter inserts. The energy-efficient eco-water circulation motor filters the water through these filters, which capture tiny particles. The antimicrobial coating helps to eliminate any contaminants that have adhered to the filtered particles, preventing them from settling in the water, and ensuring the filters are easy to clean and reusable.

While the hot tub water can be safely treated with just traditional chemicals, the electronic hygiene device significantly reduces the required amount of these chemicals, thus improving water quality for bathers. Every hot tub we manufacture is equipped with this device: WellisGuard™ system. Our filters ensure the water is cleaned multiple times daily, leaving no residue at the bottom of the hot tub. Our antimicrobial hot tub filter inserts are designed to trap contaminants in the water and can be easily rinsed off during cleaning.

CRYSTAL CLEAN SYSTEM

Thanks to the 2" diameter pipe, our motor circulates more water and does so faster thus, filtering the water more rapidly.

The new circulation jet has been designed to have 3 zones.

Two of these zones direct the water downwards to stir up heavier debris that has settled in the footwell of the hot tub.

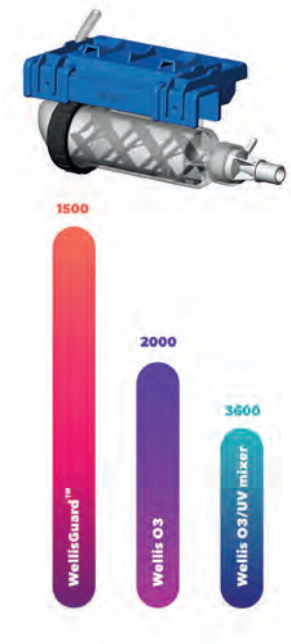

The third zone helps direct the flow toward the filtration system.

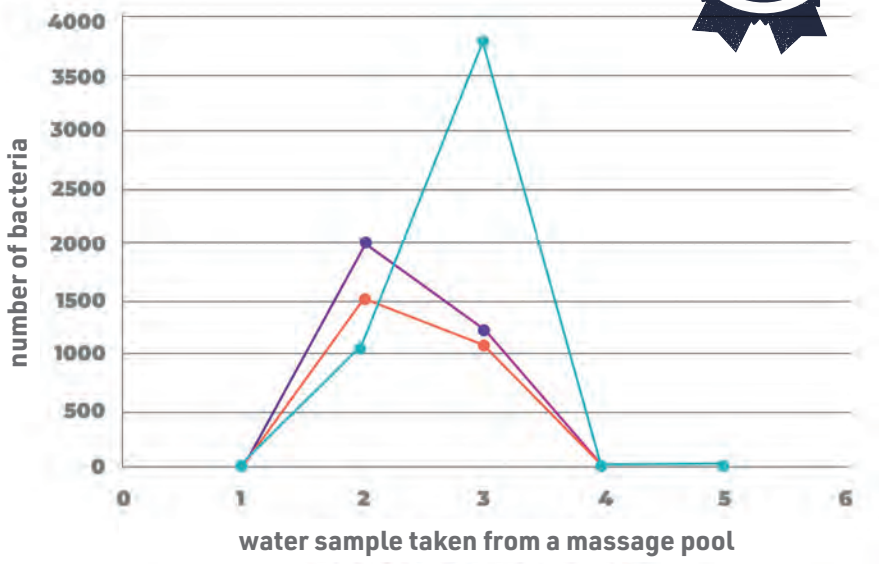

WELLISGUARD™ SYSTEM

Our development testing showed this is the most effective system we offer. To enhance water clarity and freshness, we developed the WellisGuard™ system, which has proven to be the most effective when used with chlorine and the appropriate amount of pH regulator. Thanks to our system, less chlorine is needed compared to traditional systems, making the hot tub water more pleasant and crystal clear.

Our goal is to achieve the best possible cleaning method and reduce the amount of chemicals currently used. The WellisGuard™ system is currently under patent.

IN-LINE WIS PRO

- This useful, built-in accessory provides 24-hour monitoring of your spa's water quality status via your smartphone.
- The machinery also provides the exact and required amount of chemicals.
- Since this is a built-in system, it does not disturb us during rest, it is a completely new system, developed by Wellis
